

REACH Certification of Compliance for Anaren Integrated Radio (AIR™) products

This document certifies that all products produced under the AIR product line are compliant with REACH legislation and can be accurately described in the following manners:

- Are categorized as articles under current REACH legislation.
- Are not intended to release substances during normal or reasonably foreseeable conditions of use.
- Do not contain any of the 173 SVHC (Substances of Very High Concern) described by the ECHA (European Chemicals Agency) on January 12, 2017 at levels surpassing the threshold of 0.1% by weight and with a total weight across the product line exceeding 1 metric ton.

Anaren works actively with suppliers to ensure continued compliance with REACH legislation. Furthermore, Anaren remains vigilant in monitoring the SVHC candidate list for new additions. Should a newly added SVHC candidate be found in any AIR products, Anaren Microwave will work diligently to move this product to immediate compliance.

Diboron trioxide and lead monoxide, both SVHC candidates, are present in some of the components on our parts in excess of 0.1% by weight of the component. However, these are extremely small components and the total content of these materials across the entire AIR product line is much less than the 1 metric ton threshold that requires registration.

I hereby certify that the information provided in this form is accurate and complete. I further certify that I or another representative of our Company will post notification through our distribution partners and/or our corporate website within ten (10) business days of determining that any information is no longer accurate with regard to the described part(s).

Mike Lugert
AIR Product Line Manager
